On the west side of Junn Island at -12m, there is a plateau; from here, the route continues eastward along the island's north side. The reef wall features numerous large rock formations covered in soft corals. Countless crevices inhabited by moray eels and large schools of fish accompany you throughout the entire dive.

Description

On the west side of Junn Island at -12m, there is a plateau; from here, the route continues eastward along the island's north side.

The reef wall features numerous large rock formations covered in soft corals. Countless crevices inhabited by moray eels and large schools of fish accompany you throughout the entire dive. A detour to the scattered boulders off the wall is well worth it. Huge net moray eels have made their home here.
